- Key Takeaways:**
- Central and mature estates consistently command the highest resale premiums per sqm.
 - Outram and Downtown Core lead the market due to strong accessibility and urban amenities.
 - Higher-floor units and newer flats continue to attract premium buyer demand.
 - Executive flats recorded the strongest resale price growth between 2012 and 2021.
 - Central and mature planning areas such as Downtown Core, River Valley, and Queenstown command premium prices.

Singapore HDB Resale Price Heatmap

Median resale prices per sqm across planning areas reveal strong geographic differences in housing affordability and market demand

Premium city-fringe and central planning areas continue to dominate the resale market, while outer-region towns provide comparatively more affordable housing options for buyers seeking value and space.

Top 10 Most Expensive HDB Planning Areas in Singapore

Median resale prices per sqm reveal a strong concentration of premium housing demand in Singapore’s central and mature estates.

Outram, Downtown Core, and Tanglin emerge as Singapore’s most premium HDB planning areas, while mature city-fringe estates such as Queenstown and Bukit Timah continue to command strong resale value due to their strategic location and urban connectivity.

Singapore HDB Resale Price Trends by Flat Type (2012–2021)

Larger and premium flat types consistently command higher resale prices, while all HDB segments experienced renewed price growth toward 2021 amid rising housing demand and market recovery

Executive and Multi-Generation flats remain the highest-priced HDB categories throughout the decade, while broader market trends suggest a gradual recovery in resale demand following the mid-2010s cooling period.

Higher Floors Command Premium HDB Resale Prices in Singapore (2012–2021)

Median resale prices generally increase with floor level, reflecting stronger demand for higher-floor units with better views, privacy, and ventilation.

Median resale prices rise steadily with floor level, with units above the 25th floor commanding the strongest market premiums. Higher-floor flats consistently attract stronger buyer demand due to enhanced views, privacy, ventilation, and perceived exclusivity within Singapore’s HDB resale market.

How HDB Age Impacts Resale Prices in Singapore (2012–2021)

Analyzing the relationship between flat age, resale prices, and transaction activity across Singapore’s HDB market.

While older HDB flats generally exhibit lower resale values due to lease decay, mature estates and centrally located towns continue to command strong premiums despite aging housing stock. Larger bubbles indicate higher transaction activity within each planning area.
